PW1200G Engine for MRJ Acquires Type Certification

Pratt & Whitney's PurePower® Geared Turbofan™ PW1200G engine has successfully acquired type certification from the Federal Aviation Administration (FAA) of United States. More than 15 critical engine system level certification tests were successfully completed to meet FAA certification requirements. These captured required data for certification performance, stress, endurance, emissions, acoustics, bird impact, and fan blade containment. The MRJ-70 and MRJ-90 will each be powered by two PW1200G engines. The engine was optimized specifically for the MRJ program, which in turn designed the wing and aerodynamics with the PW1200G in mind. The engines' advanced technology will contribute to a 10-20% reduction in operating costs and 50% lower in regulated emissions compared to the current generation of regional aircraft, enabling the MRJ to offer best-in-class efficiency and environmental performance.

"Hot Topic"

From Moses Lake Flight Test Center

At Moses Lake Flight Test Center, four test aircraft are being used efficiently amid high utilization rates under a busy testing program.

Four MRJs are arrayed together

Latecoere Interconnection Systems to join the MRJ program

Mitsubishi Aircraft selected Latecoere Interconnection Systems (previously LATElec) as a partner for the MRJ program supporting the Electrical Wiring Interconnect System (EWIS). This partnership is a significant step towards resolution of the MRJ wiring design challenges announced in January. The onboarding of their expert team has already been kicked off at Mitsubishi Aircraft Head Office in Nagoya, and state-of-the-art EWIS tools and technologies are being deployed. Together with Latecoere we will continue advancing the MRJ project.

Mitsubishi Aircraft Signs Airframe MRO Licensing Agreements with two partners in North America

Mitsubishi Aircraft signed definitive agreements with HAECO Americas and PEMCO World Air Services as the MRJ preferred airframe MRO (Maintenance, Repair and Overhaul) partners in North America (The LOI signing was announced last year). These agreements will greatly strengthen our customer support capabilities for our aircraft MRO services. We continue to reinforce and enhance our customer support network and infrastructure to provide higher-quality services to our customers.
